# Background

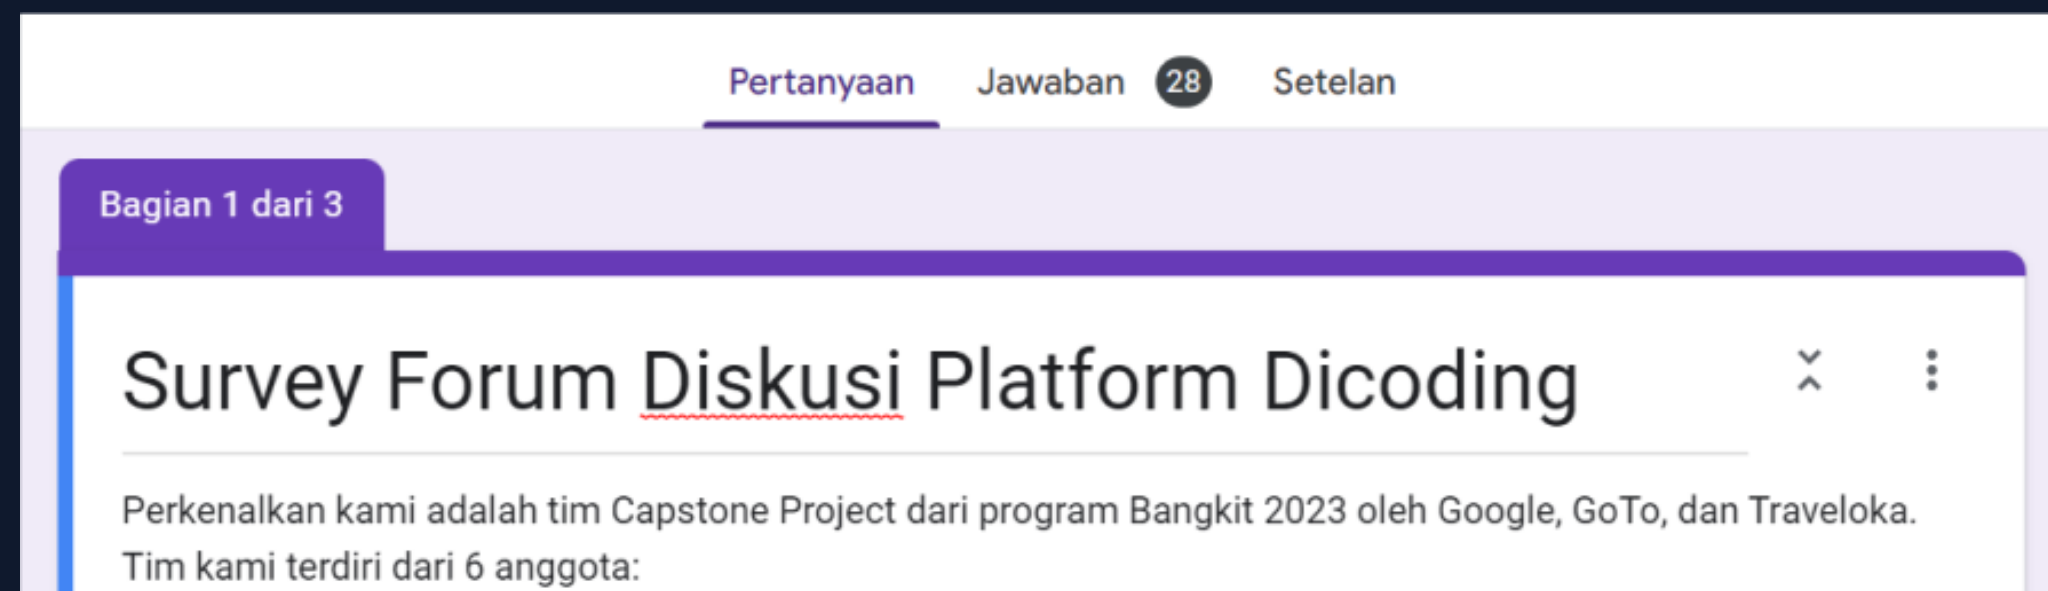

## Why is this problem interesting for our team?

Dicoding is **one of the largest online tech course** in Indonesia with high quality courses and large of community.

But its chatbot and discussion forum still use traditional queries, **resulting in irrelevant responses**. We are eager to resolve this issue.

# We did a survey!

We took **28 respondents** that have already finished at least one course of dicoding and **here are what we've got ...**

# Reason

There are still **1/3 user find** that Dicoding 's chatbot (Dibantu) **didn't effectively answer their question**

Fitur chatbot pada platform Dicoding (dibantu) sudah efektif

# Reason

On the other hand, most users agreed that new **search bar suggestion** feature can improve their experience in **finding the answer**

How to install python

How to install nodejs

Anda cenderung memilih saran yang muncul pada search bar?

So, we decided to develop some features that can  
help users find their answer, there are:

**New ChatBot**  
with Artificial Intelligence

**New Search Bar**  
with Word Suggestions

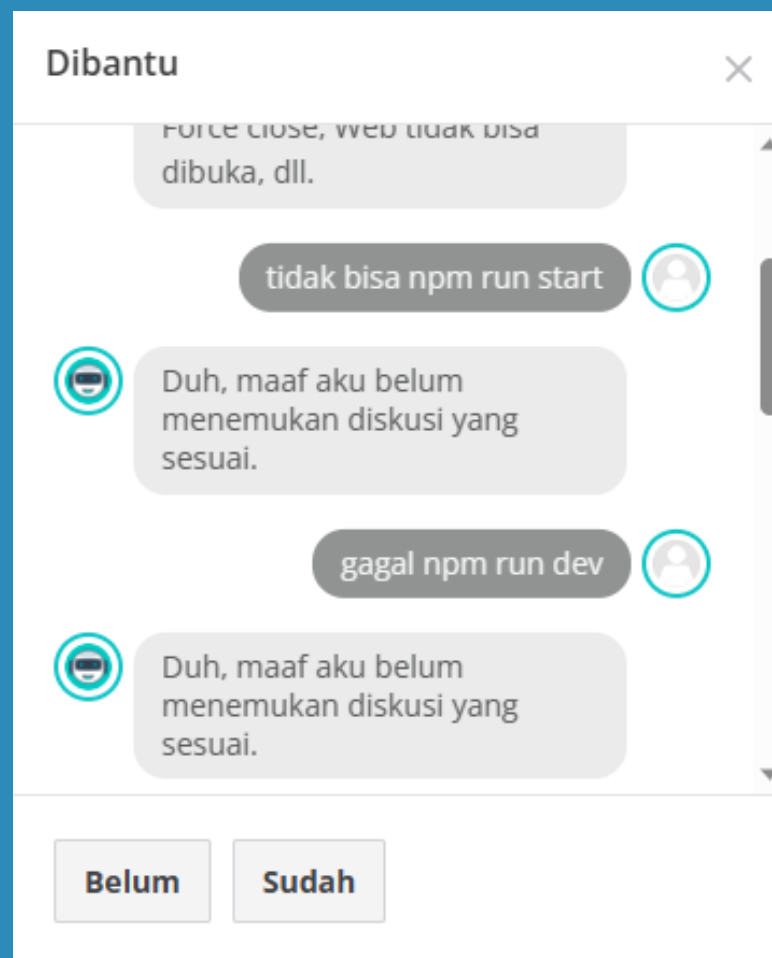

**Discussions Related**  
with Cosine Similarity
